| 5. A transmitter can be equipped with 27 CarLink Mini USB. |

Solution introduction

Your door only knows your car

When the car drives to the electric door, the door will be sensed and automatically opened

Automatic door closing, Worry-free

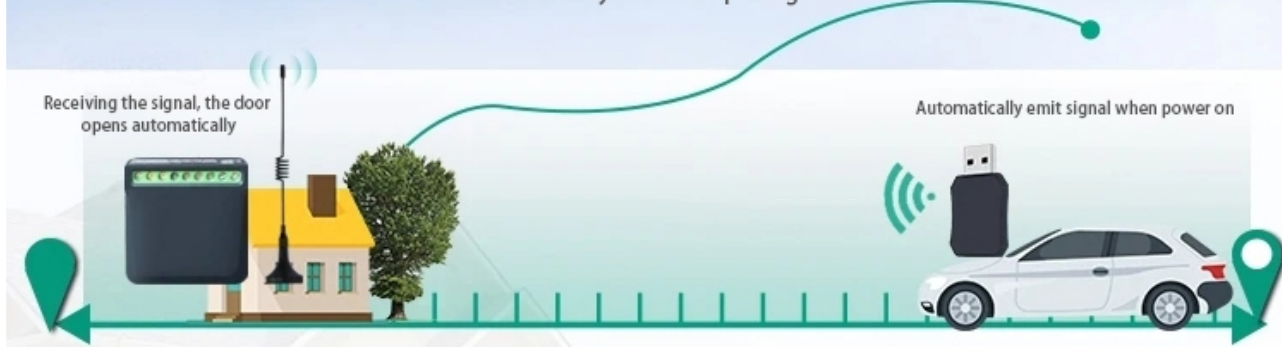

The vehicle is turned off, the transmitter is powered off, and the door will automatically close at the set time

Note: It is necessary to use the automatic door closing function of the door opener

Long distance, No wait

CarLink Mini automatically opens the door without any remote control device to meet your door opening needs

Support maximum 27 cars in private garage

Noted: A set of products is only equipped with one transmitter, multiple transmitters are required, please order separately

Wide Application Let's start our smart life

Using CarLink Mini intelligent induction door opening system, it can control all the following types of door opening motors.

**Compatible with any
brands gate motors**

As long as there is "door open
interface", the automatic door
opening system can be used

Product introduction

CarLink Mini USB intelligent induction door opening system is composed of transmitter, receiver and antenna. The transmitter is changed from the previous car cigarette lighter socket transmitter to a USB interface transmitter, which is not only more convenient, but also does not occupy the car cigarette lighter position, a simple but not simple set of equipment, open your intelligence life.

Products

Product manual

01 Transmitter

The transmitter is a USB interface plugged into the car, the LED light will flash when power is turned on, and a signal will be transmitted every 3s

02 Receiver

The receiver is connected to the "door open interface" of the door opener and receives signals

03 Antenna

Increase the sensing distance between transmitter and receiver
